

broilers as provided in the following schedule:

a) The cost per pound of each and all Growers shall be determined by using the production cost of such broilers. "Production Cost" will be determined by using a standard unit cost for feed of eight (8) cents per pound, chicks at fifteen (15) cents per head placed for all Growers within a ranking period.

b) The production cost of all broilers sold in each week will be totaled and divided by total pounds produced during that week to find the average cost per pound for the week. The Growers with cost under the weekly average will have one (1) point (one (1) point = 1/100 cents per pound) added to the average Grower compensation of three and ninety-five one hundredths (3.95) cents per pound, for every point under the average cost with no maximum limit. The Growers with a cost more than the weekly average cost will have one point (one (1) point = 1/100 cents per pound) deducted from average Grower compensation of three and ninety-five one hundredths (3.95) cents per pound, for each point greater than the weekly average cost. The minimum Grower compensation will be three (3.0) cents per pound.

c) Any Grower experiencing a loss from any cause that affects his/her cost by ten percent (10%) or more of the weekly average standard cost will be deleted from the weekly average cost. This Grower would receive rate actually earned or minimum, whichever is highest.

d) Grower will be paid on total live pounds plus dead on arrival pounds less the weight of the birds condemned because of field causes and less one-half (1/2) the weight of parts condemned.

e) Live weight equivalent of condemned birds is computed as
